FOR IMMEDIATE RELEASE

RPS Assist launches free online claim calculator for employees made redundant through insolvency

The redundancy claim process can be a daunting one, with various, disparate information sources that can be hard to find, out of date and confusing, often making what is an emotionally stressful time even harder to deal with.

In September 2016, RPS Assist revealed their new information portal, which brings together much of the help and resources that a person may need into one easy to use website. The site lists important information about the redundancy payments service and offers guidance on where to seek financial and personal support. At the heart of the website is a free claim calculator.

The calculator differs from the Government's own calculator in that it also gives an estimate of potential tax and job seekers deductions, giving a much more accurate figure. Visitors to the site can anonymously input their age, years of service, arrears of wages and outstanding holidays and the calculator instantly returns an accurate estimate, including a breakdown of the total and explanations as to how the figure was calculated.

Insolvency specialist Leonard James founded RPS Assist with a view to supporting employees through redundancy. Mr James has a wealth of knowledge and experience in the insolvency industry, having been Head of Insolvency at one of the UK's top 100 law firms.

Mr James has said "Insolvency has a huge impact on employees who are made redundant. We've seen that the information regarding the redundancy claim process can be very vague and we we're here to make the process of claiming redundancy payments clearer"
